

## Report on demonstration of management of trees under agroforestry under AKAM activity

A demonstration cum management programme was conducted on 12/12/2022 at experimental plot and on Farmers field on 16/12/2022 under AKAM activity. The Bamboo culm was managed by soil earthing and pruning of lateral branches to maintain its clump. The instructions were given to the farmers to apply Chloropyriphos to control termit in the bamboo plantation established under agroforestry system at farmer's field. Dr.Nanita Berry, Principal investigator of the project demonstrated to management of bamboo culm and its clump for healthy and disease free growth.
